

>>> **Addendum to Solution for HW #2 for Capacity Planning (Fall 2001)** <<<

Figures 1 through 4 are time versus RTT plots for the four datasets. The Meredith pm plot appears to be non-stationary (there appears to be a time-of-day variation). The NCSU plots appear quite the same for both am and pm and appear to be stationary in both cases. The NCSU pm does appear to have slightly more variability than the NCSU am plot.

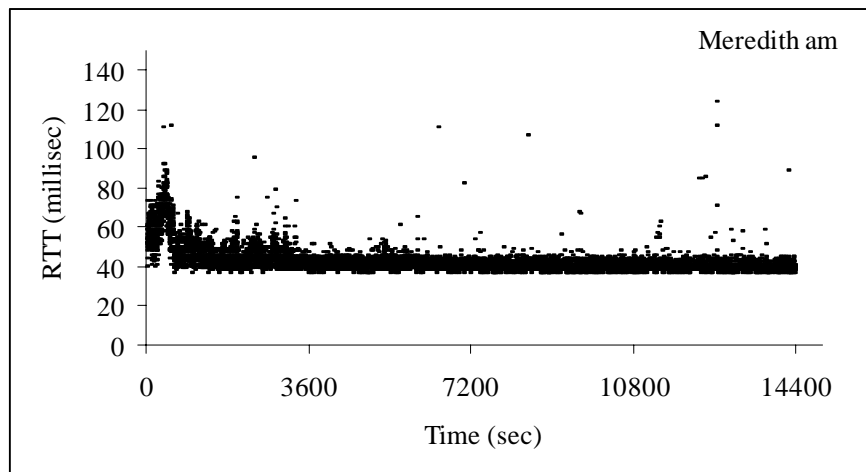

Figure 1 - Time vs RTT for Meredith am dataset

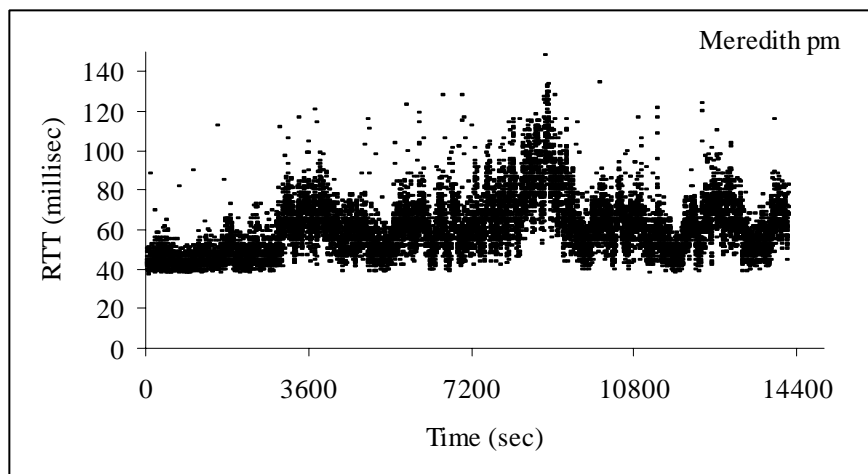

Figure 2 - Time vs RTT for Meredith pm dataset

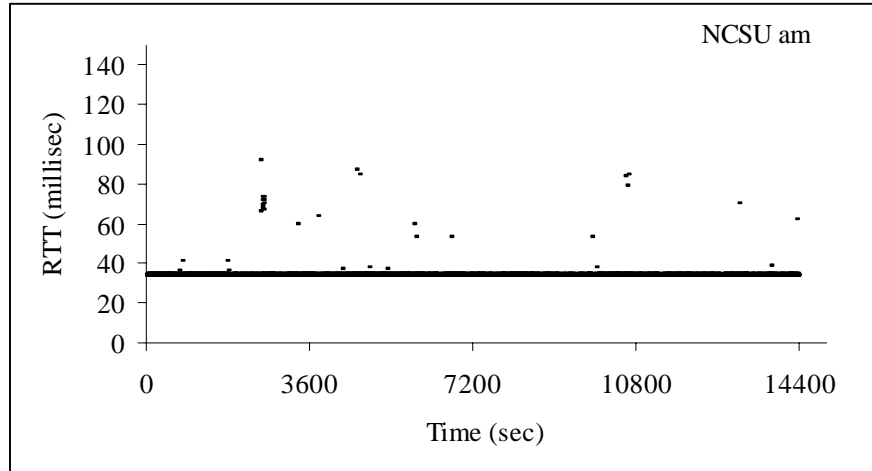

Figure 3 - Time vs RTT for NCSU am dataset

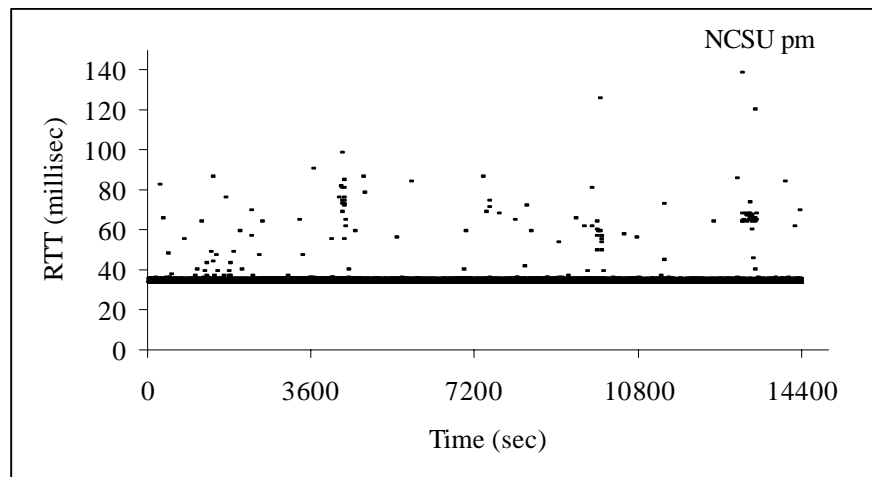

Figure 4 - Time vs RTT for NCSU am dataset
